The title of my book, Chaos and Redemption may be a little unnerving at first glance. So I invite you to a second glance. My focus is simple: We live in a world that has both order and chaos in every feature and every experience. The ultimate sign of chaos is death. The second law of thermodynamics is "Everything winds down to a state of entropy". This means everything grows old, loses its energy, and dies. Isaac Asimov once defined life as "the ability to make an effort". He would therefore say a rock is an inanimate object. Quantum physics has taught us otherwise. The dance of wave/particles at the quantum level tells us that the universe we live in is infinitely more complex and yet, much more unified and simple than we had previously guessed.
