Many people believe in prepping. This helps to ensure that enough supplies such as food and water are readily available in a moment's notice in the event of an emergency. This is crucial in today's day and age because weather events such as hurricanes, earthquakes, wildfires, floods and tornadoes can impact a community's methods of getting food, water, medical care and electricity. Prepping can help ensure that families can survive for days, weeks, or even months which is essential to the survival of mankind.

John Shrek Walters says

Minimalistic self sufficiency reference.

Book number 1:

Prepping: The Ultimate Survival Guide The Guide to Surviving Any Disaster By: Eliza Plum

If FEMA (Federal Emergency Management Administration) published a basic guide for beginners on how to prepare, this could be it. This is an updated version that includes modern day items in addition to the tried and true products of yesteryear.

The book breaks down each section to a step by step guide for the beginner to build what they need for themselves. In this fashion covers the minimalism life guide.

Book number 2:

Prepping For Survival By: Spenser Daly

Covers the above and goes into a deeper understanding of what you can do to help ensure you and/or yours survive. Starts covering the edible wild foods, and only because this category is a never ending learning process.

Book number 3:

The Complete Guide for Homesteading DIY Basic Step By Step Guide for Self Sufficiency By: Robert Herron

DIY basic step by step guide for self sufficiency. Sets you up for any contingency, so anything outside of normal day to day life, won't affect you.

I wrote the above paragraph while still thinking about book number 2. However it's not quite the same as the first 2 books. It was written by someone who has homesteaded and contains only what he did

The solutions that he used work nicely for him (I just think that it would've been a better book if he had incorporated a few alternate choices and explained why he chose as he did. This strictly my opinion and I've no personal experience with homesteading.. Prepping and such has made my life easier when things happened unexpectedly.) Back to the review:

Okay, once you get past his recipes for applesauce and bread (which sound/read like they'll taste delicious), he starts getting into the prepping mindset. Mostly he lists what people should be doing and most aren't.

All three books cover prep -being prepared - from differing points of view, yet all try to convey what more people should be working towards.

Horrible Editing And Copy/Paste Feel That Screams Wikipedia

I have never given a book such a low rating...and I do not want to say that the author provided no real information. I picked this up because I actually advise self-sufficient lifestyle seekers and hoped this may be something I could suggest they look over as well. Not going to happen.

It started with this (literally), " If person grew up during the Cold War, it, sometimes, did feel like that person's world would end at any moment with a nuclear mushroom. The United States would make the Soviet Union so angry that they would fire all their nuclear missiles at us and the United States would respond with their own nuclear missiles. The ones who really believed that the end was coming were called survivalists. When the mushroom clouds appeared in the skies, they would be ready for it and would be able to ride out the coming apocalypse without a problem."

I skipped quickly to the table of contents and found nearly every form of information to be the same or equal to information anyone can find online for free. I can not, in good conscience, recommend this book.
